

PROJECT BY- SUMIT JANMEJAY YADAV

GUIDED BY – MR SAMEER WARSOLKAR SIR

This project focuses on developing an efficient inventory management system using SQL. The primary aim is to analyze and manage inventory levels, track stock movements, and optimize supply chain operations to ensure that products are available when needed while minimizing holding costs.

The dataset encompasses various attributes, including product details, stock quantities, supplier information, and transaction history. By employing SQL queries, we will perform key operations such as joins to consolidate data from multiple tables, subqueries to extract specific insights, and aggregate functions to monitor inventory performance over time.

This project will demonstrate the importance of data-driven decision-making in inventory management, allowing businesses to streamline operations, reduce waste, and enhance customer satisfaction. Ultimately, the findings and analysis presented will serve as a valuable resource for stakeholders looking to improve their inventory practices through effective database management and querying techniques.

Inventory management system

- **Objective**

To develop a comprehensive inventory management system that enhances the accuracy and efficiency of inventory tracking, optimizes stock management, and provides real-time insights into inventory levels and sales trends, ultimately leading to improved decision-making and cost savings for the organization

Components:

Address: this table contain the information of region name ,country name ,state, city ,postal code ,warehouse address ,warehouse name of warehouse

Customer: this table contain the information of customer name, customer address, customer email, Customer phone, status, order date, per price unit and total item quantity and order id.

Employee: this table contain the information about employee where employee name, employee email Employee phone, employee hir date, employee job title, order id.

Product: this table contain the information about product where category of product, product name, Product standard cost, profit , product list price and order id.

Functionality:

warehouse management for tracking and organizing storage locations, and **customer management** for handling customer records and order histories. Implement **employee management** to oversee staff details and performance related to orders. The **product management** feature will allow for easy addition, updating, and categorization of inventory items. Additionally, integrate **order processing** to create and update orders while calculating total values. **Inventory tracking** will monitor stock levels and trigger alerts for low inventory. Finally, provide **sales reporting** capabilities to analyze trends and performance metrics, ensuring data integrity and security throughout the system.

Aim

The aim of this inventory management system project is to develop a comprehensive, efficient, and user-friendly solution that streamlines the tracking and management of inventory, orders, customers, and employees. The system seeks to provide real-time visibility into stock levels, facilitate effective order processing, and enhance decision-making through detailed analysis and reporting capabilities. Ultimately, the project aims to improve operational efficiency, reduce costs, and enhance customer satisfaction by ensuring timely and accurate inventory management

	Shipping Clerk	20
	Stock Clerk	17

7 Find Customers Who Have Never Canceled an Order

SELECT DISTINCT CustomerName FROM customer WHERE CustomerEmail NOT IN (SELECT CustomerEmail FROM customer WHERE Status = 'Canceled');

Result Grid		Filter Rows:
status	customername	
Canceled	Roxanna Wade	
Canceled	Nada West	
Canceled	Tamatha Delgado	
Canceled	Elwood Hampton	
Canceled	Meryl Cole	
Canceled	Fae Glenn	
Canceled	Lasonya Beard	
Canceled	Jon Petersen	
Canceled	Samara Barnett	

"I have a comprehensive dataset from SQL databases, and I would like to present some examples for your review."

In summary, this inventory management project shows how important good inventory control is for saving money and improving operations. By using real-time data, we can make better decisions and reduce costs. Keeping the system updated will help us stay efficient and grow in the future.
